Geiger Demolition - a professional partner with many strengths.

Every deconstruction or demolition of large buildings and facilities involves individual requirements. We master these challenges, despite the huge quantities of material involved, thanks to our excellently trained team of employees, our fleet of machines and our vehicle fleet.

Even before demolition or gutting, we ensure that all non-recyclable materials are dismantled and sorted and disposed of professionally. If pollutants are installed in buildings, these are also removed by us as an approved specialist remediation company. We also take care of the dismantling and recycling of electrical and industrial installations.

500.000

m³ of converted space is demolished every year

Specialist remediation company approved in accordance with the Hazardous Substances Ordinance

350.000

tons of recycled material are reused or processed through recycling

1,2 mio.

m³ of enclosed space are gutted and renovated every year

We ensure that we are not burdened by legacy issues.

To ensure that not only our environment but also our future regains ground, we are a competent partner for local authorities, investors and industrial operators in the field of remediation.

We use our unique expertise, sophisticated logistics concepts and close-knit waste disposal network to create cost-effective solutions for gutting and demolishing large buildings, remediating contaminated sites, building and operating landfills, dismantling electrical and industrial facilities and recycling land.

10

active landfills or landfills under construction

1,6 mio.

m³ of contaminated water is cleaned in the process engineering department

350.000

tons of contaminated material are recycled or disposed of properly

120.000

m² surface and base seals for safe landfills

Every problem is only a problem until it is safely solved.

As one of the leading environmental technology companies in southern Germany, the treatment and disposal of contaminated mineral waste is one of our core competencies.

We offer a comprehensive network of safe disposal options with short distances. This results in low transportation costs to our landfills and treatment plants. We are represented by our subsidiary TERRAG in Saarland, Luxembourg and France.

3 mio.

tons of mineral waste are safely disposed of per year

350.000

tons of treated mineral waste in our own processing plants

High disposal reliability with economical total costs

Future-proof disposal of contaminated mineral waste
